

- 29 * 10 hole proto area
- Separate lines for power rails
- Patch area for non-proto components

This E-block contains a small prototype board for developing circuits and projects. Connectors for two E-block ports allow prototype wires and leads to be connected to the rows and columns on the prototype board.

A small dedicated ‘patch’ area allows more awkward components – like potentiometers, and switches – to be soldered to the circuit board itself.

This board is part of the E-blocks™ family of products:
